

## **FOR IMMEDIATE RELEASE**

### **Portlock announces release of Portlock Storage Manager 3.35**

BUTTE, MONTANA - June 22, 2005 – Portlock[tm], a leading provider of next-generation backup, storage management and disaster recovery software, today announced the latest release of its flagship product, Portlock Storage Manager. Portlock Storage Manager is enterprise software for performing rapid bare-metal restores, server migrations, and disaster recovery when imaging a Novell NetWare or Linux system.

Portlock Storage Manager Version 3.35 now supports Online Imaging of NetWare 6.5 servers. By combining Novell's Snapshot technology with Portlock's Imaging technology, NetWare 6.5 servers can now be imaged while Novell Storage Services (NSS) Pools and NSS volumes are mounted and active. Available only for NetWare 6.5 SP3 and later versions, these new features use NetWare 6.5 Advanced Snapshot technology which allows online or offline backup and migration of the consolidated store of file system information at any time without interrupting network access.

“One of the most sought-after improvements in the storage management arena is the ability for network administrators to recover a failed volume, pool, partition or an entire computer system as quickly and transparently as possible,” said John J. Hanley, president and CEO of Portlock. “With this release, no other vendor’s software can match the ability of Portlock Storage Manager to image a NetWare server while it is running and create an image that can be used to restore a system to bare-metal hardware. This feature alone will excite every system administrator who has ever had to backup or restore a production network server -- and is another compelling reason to move to the latest version of NetWare.”

#### Availability

Portlock Storage Manager 3.35 is available for immediate download and evaluation at [www.portlock.com](http://www.portlock.com) .
